SUMMARY

AI engineering leader specializing in the design and security of production agentic systems. I architect agent runtimes, tool execution and sandboxing, memory and retrieval, orchestration, and evaluation, then build the guardrails and red-teaming that keep them reliable in adversarial, high-consequence environments. At HiddenLayer I secure agentic systems for enterprise customers, instrumenting agentic workloads for runtime protection and building product for agentic red teaming and adversarial prompt engineering. I founded cAIge, the vendor-agnostic Certified AI Guardrail Engineer program, defining an industry taxonomy for prompt-injection defense, data-exfiltration prevention, and guardrail validation. Deep working knowledge of foundation-model internals and the math beneath them, backed by a decade of architecture, engineering, and technical leadership across enterprise and education at scale.

EXPERIENCE

AI Architect/Engineer (Agentic Systems Security) — *HiddenLayer* Oct 2025 – Present

- Architect and secure production agentic systems for enterprise customers: agent loops, tool execution and sandboxing, memory and retrieval, and security boundaries, threat-modeling prompt injection, tool-output poisoning, and sandbox escape
- Instrument agentic workloads for runtime protection against threats like prompt injection, and architect supply chain protections into CI/CD for secure model development
- Build product for agentic red teaming and adversarial prompt engineering, generating multi-turn attack flows that surface misuse and failure modes in customer AI systems
- Develop core platform capabilities and customer integrations, turning research prototypes into reliable, shipped product
- Partner with enterprise customers to design secure AI applications and agents, advising on evaluation and guardrail strategy grounded in foundation-model internals

Chief Research Scientist (Agentic Systems Research) — *Average Joes Lab* Jul 2025 – Present

- Founded an open, community-driven research lab and lead its applied AI work: agent runtimes, episodic and semantic memory harnesses, sandboxed tool execution, and multi-provider inference gateways
- Drove autonomous-research programs to systematically discover better context-management, memory, tool-use, planning, and orchestration strategies for agents
- Built adversarial-AI research, including a generalized red-team agent and a zero-training, embedding-space prompt-injection detector
- Authored a framework-free, code-first agentic-engineering curriculum and a research-engineering learning path, mentoring newcomers into independent research

Chief Enterprise Architect — *Odovey Consulting* Jun 2025 – Present

- Lead AI and cloud strategy for enterprise clients: AI agent development, RAG implementation, supervised fine-tuning, and AI model infrastructure
- Authored a vendor-agnostic GenAI adoption framework for planning, governing, and scaling generative AI across the enterprise
- Advise executives on AI architecture and adoption, aligning AI investments with security and measurable business outcomes

Senior Content Developer — *Microsoft* Aug 2024 – Oct 2025

- Developed a workflow-based agentic authoring system using prompt orchestration, contextual grounding, and RAG, reducing time-to-first-draft from three days to under five minutes

- Contributed to Azure Copilot evaluation by implementing LLM-as-a-judge methodologies and grading rubrics to assess accuracy, relevance, groundedness, and response quality
- Led Azure Container Registry technical enablement, creating scenario-driven content reaching more than 500K developers monthly
- Designed context and prompt frameworks that improved the reliability and usefulness of AI-powered developer experiences

Founder — *Chasing Cloud Careers* Aug 2023 – Present

- Co-founded Chasing Cloud Careers, focusing on accessible engineering education
- Curated free learning resources into structured paths for various engineering roles
- Mentored professionals in career transitions, fostering a supportive learning community
- Developed self-directed learning approaches that empower individuals to explore technology careers

Principal Cloud Architect — *CBTS* Sep 2021 – Jul 2024

- Designed and implemented secure, scalable cloud solutions on Azure and AWS for migrations, modernization, and AI-enabled architecture
- Delivered 13 enterprise projects, averaging $94K per engagement, focusing on AI/LLM-driven architectures and enterprise AI adoption
- Designed cloud-native PoCs using Hugging Face NLP models and advised executives on scaling AI workloads across multi-cloud platforms
- Engineered reusable IaC patterns, reducing deployment errors by 40% and provisioning effort significantly

Training Architect - Azure — *Linux Academy* | *A Cloud Guru* | *Pluralsight* Jun 2019 – Aug 2024

- Authored 9 Azure certification courses, achieving over 20.8M minutes viewed and a 4.1/5 learner rating
- Developed 50+ auto-provisioned labs, enabling 175K+ completions while reducing setup time by 90%
- Audited over 150 hours of content, resolving ~1,300 tickets and improving course ratings from 4.3 to 4.6
- Authored and refreshed 400+ exam assets, boosting learner pass rates by 10% for key certifications

Jr. Systems Administrator — *Endurance International Group* Sep 2018 – Jun 2019

- Supported shared, VPS, and dedicated hosting environments for over 600 SMB customers in a 24/7 operations team
- Resolved ~105 support tickets monthly with a 96% customer satisfaction rate
- Automated repetitive tasks using Bash, reducing average ticket handle time by 18%
- Executed zero-downtime migrations for 80+ WordPress sites, ensuring SLA compliance

SELECTED PROJECTS

cAIge: Certified AI Guardrail Engineer
Founded the vendor-agnostic AI guardrail engineering certification: a five-domain taxonomy and exam covering prompt-injection defense, data-exfiltration prevention, adversarial attack mitigation, and guardrail validation. (caige.org)

Agent runtimes and orchestration
Standalone agent execution engines, the loop, tool dispatch, and event streaming, plus orchestration patterns (routing, orchestrator-workers, evaluator-optimizer) and a code-first agentic-engineering curriculum.

Sandboxed tool execution
Isolated Docker execution for agent tools with seccomp, dropped capabilities, resource limits, egress control, and lifecycle management to contain prompt-injection blast radius.

Agent memory harnesses
Episodic and semantic memory for agents: write-time fact extraction, hybrid BM25-plus-vector retrieval, and token-accurate working-memory management.

Adversarial AI and red teaming

A generalized red-team agent and a zero-training, embedding-space prompt-injection detector for evaluating and hardening agentic systems.

Inference gateways and engines
Multi-provider LLM gateways with routing, fallbacks, PII guardrails, quotas, and observability, plus an LLM inference engine and runtime built from scratch in Rust, Go, and PyTorch.

Technical writing: cdovey.dev
A deep technical series on LLM internals, agent architecture, and AI security: agent loops, memory, sandboxing, prompt injection, red teaming, and evaluation. (cdovey.dev/blog)

CERTIFICATIONS

- Azure Solutions Architect Expert (Microsoft Azure)
- Azure Administrator Associate (Microsoft Azure)
- Azure Security Engineer Associate (Microsoft Azure)
- Azure Network Engineer Associate (Microsoft Azure)
- Azure AI Fundamentals (Microsoft Azure)
- Azure Fundamentals (Microsoft Azure)
- Microsoft Certified Trainer (Microsoft Azure)
- AWS Solutions Architect Associate (AWS)
- AWS Cloud Practitioner (AWS)
- CompTIA Security+ (Security)
- CompTIA CySA+ (Security)
- CompTIA Security Analytics Professional (CSAP) (Security)
- PCEP – Certified Entry-Level Python Programmer (Other)
- Linux Essentials (LPI) (Other)
- Intro to Gen AI Mini Course — AI by Hand (1st Cohort) (Other)

VOLUNTEER

Robotics Mentor — *The Awty International School* Aug 2025 – Present

Mentoring students on programming and electrical engineering for FIRST Robotics Competition for FIRST Championship.

SKILLS

AI/Agentic: Agentic systems, agent orchestration, tool use, sandboxing, RAG, memory, evaluation, LLMs, foundation models

AI Security: Prompt-injection defense, red teaming, guardrails, runtime protection, supply chain security, model gateways, misuse resistance, threat modeling

Engineering: Python, TypeScript, Go, Next.js, React, Node.js, distributed systems

Cloud/DevOps: Azure, AWS, Kubernetes, Docker, Terraform, CI/CD, observability

Leadership: Technical strategy, architecture, mentoring, technical writing, executive communication
